Betting rules and rates — final

50pick administration · 14 August 2026 · all rules settled, nothing outstanding. Amended 18 October 2026 with section 4, Maswali Millionea, decided 16 October 2026.

These are the final betting rules. Nothing here is open. They are being written once into the player rules, the administrator guide, the Up & Down documentation and the system itself, so that every document on the platform says the same thing before we go live. Every figure was calculated by the platform's own settlement code.

1 · The rules

Rule	What it means	Decided by
Up & Down charges like polls	Our fee on Up & Down becomes **13% of the losing side**, exactly as on normal polls. No second charge model anywhere on the platform. On a balanced round our income halves — accepted deliberately, to keep one rule customers can understand.	Administration, 14 Aug
Players may take as many positions as they want	Any number of bets on a market, on **either or both sides**. The "one side per market" restriction is removed.	Administration, 14 Aug
All bets count normally	Two-sided betting is **not** a special case. Every bet counts toward leaderboards, affiliate volume and daily activity targets exactly like any other bet.	Owner, 14 Aug
Two-sided betting does not clear a bonus	The one exception. Only **one side** of a market counts toward a bonus betting requirement. The player is warned clearly, and the bet is still placed. Reasoning on page 2.	Owner, 14 Aug
Stake limits: 1,000 minimum, 1,000,000 maximum	The same on **both games**. The maximum is **per bet** — it is checked on each individual bet, not on a player's total across a market. **Applied to production on 14 August 2026** (it had been running 500 / 100,000 on Up & Down since 26 July, and the config was read back off the live database to confirm).	Owner, 14 Aug
Every failure must explain itself	Any message telling a player something did not work must say **why** and what to do next — and must not always be a red error. A problem the player can fix is a warning, not a fault.	Owner, 14 Aug

One consequence, on the record. Allowing both sides *and* keeping the cap per bet means a player's total money on one market is no longer limited by the stake maximum — three bets of 100,000 put 300,000 on one round. The remaining controls are the player's own balance and the daily loss limit. The largest total any player has ever had on one Up & Down round is 85,000. Accepted, not an open question.

2 · Why two-sided betting cannot clear a bonus

How bonuses work. Bonus money cannot be withdrawn straight away. The player must bet it first — currently **five times** the amount granted, within 30 days. Once they have bet that much, the bonus becomes real, withdrawable cash.

Now that a player may back both sides of the same round, that requirement could be met without taking any risk at all:

What the rule prevents — a 10,000 bonus, cleared without a single prediction

We grant Amina a bonus of	10,000
She must bet 5 × that before withdrawing	50,000
She bets 25,000 on UP and 25,000 on DOWN of the same round	50,000 — requirement met
One side wins, one loses. She receives back	46,750
Her total cost — just our fee	**3,250**
Her net gain on a 10,000 bonus	**6,750**

She never predicted anything. Without this rule, every bonus we issue would be worth roughly two-thirds of its face value in cash on the day it is issued, to anyone who knows the trick.

The rule, precisely. When a player holds bets on both sides of the same market, only one side counts toward a bonus betting requirement. Everything else about the bet is normal: it is placed, it can win, it counts toward leaderboards and activity like any other bet. This is the *only* place where two-sided betting is treated differently, and only because the money at the end of it is ours.

Nothing is affected today. Production currently holds **zero bonus grants and zero bonus balance**. This rule takes effect before the first grant is issued — including for the VIP rewards scheme, which will run on this same machinery.

What the player is told

The player must never discover this after the fact. When someone holding a bonus takes the opposite side of a market they are already on, they get a clear warning *before* confirming — a warning, not an error, and the bet still goes ahead if they want it:

This bet won't count toward your bonus.
You already have money on the other side of this market. Only one side counts toward the **TZS 32,000** you still need to bet before your bonus can be withdrawn.
Place bet anyway · Cancel

The same rule is written into the bonus terms shown when a bonus is granted, the player rules, the wallet screen where the remaining requirement is displayed, and the administrator guide — in the player's own language, in all three languages the app supports.

3 · What has to change in the system

Three of the rules above do not match what production enforces today. All three are being corrected before we go live, and every document on the platform is being brought into line with this page at the same time.

Rule	Production today	Corrected to
Up & Down fee	13% of the whole pool, capped	13% of the losing side
Minimum stake	500	1,000
Maximum stake — Up & Down	100,000	1,000,000
Maximum stake — normal polls	1,000,000	1,000,000 — already correct
Positions per market	one side only	either or both sides

Markets already running are not repriced. Every market freezes its rates when it is created and settles on those rates for its whole life — that is a deliberate protection, so a rule change can never alter a bet someone has already placed. The new rules apply to everything created from the change onward.

Sign-off

Approved by	Signature	Date

On sign-off these rules are applied to the system and written into the player rules, the administrator guide, the Up & Down documentation and the bonus terms — one rule set, stated identically everywhere, checked document by document.

4 · Maswali Millionea — the third product (decided 16 October 2026)

A weekly jackpot, on rules of its own. It is **not** pari-mutuel: a player buys a ticket at a fixed price and answers fifteen YES/NO questions, and every ticket with all ten graded answers right shares the week's jackpot equally. Decided by the Owner on 16 October 2026 and written into the platform rules the next day. **Not on sale yet:** it ships switched off for every player, and no week can open until the Owner has recorded the licence basis and funded the guarantee. Every figure below is an administrator setting; each week freezes its own at its open, and a change applies from the next week.

Rule	What it means	Decided by
A fixed ticket	**TZS 1,000** a ticket, from the real balance only — bonus money never buys one.	Owner, 16 Oct
Fifteen answers, ten that count	Ten main questions and five reserves, in a fixed order. A ticket wins only on **10 of 10**. A main question that voids is replaced by the first unused reserve; if more mains void than there are usable reserves, the whole week voids and every ticket is refunded in full.	Owner, 16 Oct
The week	Sales open Monday 00:00 and close Friday 18:00 EAT, always at least 30 minutes before the first of the fifteen events. After the close nothing can be bought or cancelled.	Owner, 16 Oct
A floor under every winning week	A week with a winner pays a jackpot of **at least TZS 1,000,000**, counted before our fee. When the week's own money falls short, the guarantee — Owner capital — tops it up.	Owner, 16 Oct
Our fee: 13% of the jackpot, only when someone wins	**13% of the jackpot**, taken only in a week with at least one 10 of 10 ticket. A week nobody wins is charged **nothing**. TRA 10% and GBT 5% come out of our fee, as on the other games.	Owner, 16 Oct
Equal shares	Every winning ticket gets the same share of what is left after the fee, rounded down to the shilling. The few shillings the split cannot share join the next jackpot as far as the week's own money covers them; the rest stays with the guarantee, whose top-up covers only the fee and the shares — so in a week the guarantee tops up, the whole remainder stays with it. There is no minimum share.	Owner, 16 Oct
Nobody wins: everything rolls	The whole week's sales roll into the next jackpot. Real money only — a top-up never rolls — and there is no cap.	Owner, 16 Oct
10 tickets per account per week	The one exception to "as many positions as they want".	Owner, 16 Oct
Cancellation	The platform's free cancellation, unchanged: within 5 minutes of buying, a full refund; a ticket bought in the last 5 minutes before the close cannot be cancelled. There is no paid exit.	Owner, 16 Oct
Who may buy	Staff, and accounts 50pick operates, are refused. Every responsible-gambling limit applies.	Owner, 16 Oct

Rule	What it means	Decided by
Results	One officer seals each question from its named source, with evidence — never the AI. A question not played and settled within 48 hours of its start voids. A 24-hour check window opens when the results are final, and never closes before 12:00 EAT.	Owner, 16 Oct
Stopping the product	Three cases: a week not yet on sale is named the final week at least one full week before its sales open (named on the hub and the home card from then on, and never opened early); a stop ordered while a week is on sale makes that week the final one; a stop ordered while no week is on sale and a week's results are being decided cannot take that week (it settles under its own rules); the refusal names the Owner's next act — make the next week to open (once drafted) the final one, accepted at less than a full week's notice while that week's results are being decided, its buyers told when they buy. A stop between weeks takes the first path. The final week runs normally and whatever the jackpot holds goes into it; if no ticket gets 10 of 10, the highest score shares it.	Owner, 16 Oct (OD-03); after a close: build lead on delegation, 18 Oct

What Millionea does not share with the other two games. The fee comes out of the jackpot, not out of a losing side, and only in a winning week. And a winning ticket **can** be paid less than it cost: when very many tickets reach 10 of 10, each equal share is small. Everywhere else on the platform a winning bet is never paid less than its stake; on Millionea the player is told that it can happen, in the rules, in Help and by the assistant.

Six weeks, to the shilling — the jackpot carries until someone wins

Week	Tickets	Carried in	Result	Top-up	Fee	Paid	Jackpot after
1	300	0	no winner	—	0	0	300,000
2	400	300,000	1 winner, at the floor	300,000	130,000	870,000	0
3	500	0	no winner	—	0	0	500,000
4	600	500,000	no winner	—	0	0	1,100,000
5	700	1,100,000	no winner	—	0	0	1,800,000
6	800	1,800,000	3 winners, 754,000 each	0	338,000	2,262,000	0
Total	**3,300**			**300,000**	**468,000**	**3,132,000**	

Check: sales 3,300,000 + top-up 300,000 = paid 3,132,000 + fee 468,000. Week 2 cost the house its 300,000 top-up against a fee of 130,000; week 6 needed none. Over the six weeks 50pick keeps 397,800 of fee after TRA and GBT, less the 300,000 of top-up: **+97,800**.

The guarantee is funded before the first week. A week cannot open unless the guarantee holds the floor, less any confirmed carry-over, for every week not yet settled — the new one included. Week N+1 opens while week N is still being graded, so the Owner pays in **TZS 2,000,000** before week 1.

Sign-off — section 4

Approved by	Signature	Date

On sign-off section 4 stands with sections 1 to 3: written into the Maswali Millionea rules, Help, the help assistant, the administrator guide and the operator guide, and applied to the system before the first week opens.

50pick — internal decision record, final. All figures calculated by 50pick's own settlement code at the rates agreed on 14 August 2026 (13% of the losing side). Bonus terms shown are the platform defaults: 5× betting requirement, 30-day validity. The warning wording on page 2 is a draft for approval. Section 4 states Maswali Millionea’s rules as the Owner decided them on 16 October 2026; its six weeks are worked by Millionea’s own settlement arithmetic, and the platform tests them to the shilling.
