

"Up & Down" Financial Commodity Prediction Game

5-Minute Real-Time High-Frequency Micro-Poll Monetization Engine

TARGET PRODUCT:

Up & Down (Gold Price Poll)
Model: 5-Minute High Frequency

PREPARED BY:

Product & Monetization Strategy
Exchange Rate: 1 USD = 2,600 TZS

PROJECTED GO-LIVE:

Q3 2026
FX Benchmark: USD / TZS

1. EXECUTIVE SUMMARY & CORE MECHANICS

"Up & Down" is a rapid 5-minute micro-prediction game where players speculate on real-time financial market movements (e.g., "Will Gold go Up or Down in the next 5 minutes?"). By leveraging automated sweep polling, the system runs **12 games per hour (288 rounds daily)** continuously.

The business model collects a **13% platform commission** on the total poll volume per round (benchmarked at TZS 10,000 average pool payout per 5-minute game), generating high-margin continuous revenue while maintaining low automated poll operational expenses (\$0.20 per game).

DAILY GAME FREQUENCY

2. BASELINE MODEL & UNIT ECONOMICS

The project operates on structured high-frequency unit economics with exact parametric costs and revenue splits per 5-minute round:

- Game Frequency:** 60 mins ÷ 5 mins = **12 games/hour** (288 games/day • 2,016 games/week • 8,640 games/month • 105,120 games/year).
- Poll Expense Structure:** 2 Sweeps per 5-minute game @ \$0.10 per sweep = **\$0.20 per game** (TZS 520 per game @ \$1 = TZS 2,600 exchange rate; equivalent to TZS 6,240/hr).
- Average Pool Volume per Round:** TZS 10,000 gross payout pool per game.
- Platform Monetization Rate:** Fixed **13% commission** per poll = **TZS 1,300 gross revenue** per 5-minute game.

3. EXACT FINANCIAL P&L BREAKDOWN (COMMISSION VS. POLL EXPENSE)

Below is the comprehensive financial statement across all operational timeframes utilizing exact figures calculated from the unit model.

TIMEFRAME	ROUNDS	GROSS COMMISSION (TZS)	POLL EXPENSE (USD / TZS)	NET PROFIT / PNL (TZS)
Hourly (1 Hour)	12	TZS 15,600	\$2.40 • TZS 6,240	TZS 9,360
Daily (24 Hours)	288	TZS 374,400	\$57.60 • TZS 149,760	TZS 224,640
Weekly (7 Days)	2,016	TZS 2,620,800	\$403.20 • TZS 1,048,320	TZS 1,572,480
Monthly (30 Days)	8,640	TZS 78,624,000	\$12,096.00 • TZS 31,449,600	TZS 47,174,400
YEARLY (365 Days)	105,120	TZS 943,488,000	\$145,152.00 • TZS 377,395,200	TZS 566,092,800

Key Profitability Ratio & Scalability Impact

For every **TZS 1,000** spent on automated sweep polling overhead, "Up & Down" generates **TZS 2,500** in gross platform commissions, yielding a consistent net operating margin of **60.0%**. If average poll volume doubles to TZS 20,000 per game while sweep expenses remain fixed at \$0.20, annual net profits expand to **TZS 1,509,580,800 (\$580,608)**.

4. KEY STRATEGIC RECOMMENDATIONS FOR PRODUCT LAUNCH

- **Multi-Asset Expansion:** Replicate the 5-minute polling engine across high-volatility pairs beyond Gold (e.g., BTC/USD, EUR/USD, Crude Oil) to run concurrent revenue streams.
- **Tiered Volume Pools:** Introduce high-tier pools (e.g., TZS 50,000 and TZS 100,000 rooms) to capture VIP users without increasing sweep infrastructure expense.
- **Automated FX Hedging:** Settle sweep poll expenses in USD seamlessly via automated liquidity reserves to buffer local currency fluctuations.
