

OPERATOR BRIEFING • 2026

Predict events. Not chance.

A Tanzania-licensed prediction-markets platform that lets players stake on real-world outcomes — football, weather, macro, culture — and share the pool with the others who got it right. Mobile-first. Bilingual. Regulator-ready.

What 50pick is

50pick is a **pari-mutuel prediction market** built for Tanzania. Players ask "yes or no" on a real-world question — *"Will Simba SC win the Kariakoo Derby?"* or *"Will the long rains start before April 15?"* — stake what they believe, and share the pool with everyone who got it right. Losers' stakes flow to winners minus a transparent operator margin. No house edge, no bookmaker setting the price.

Why this matters

Tanzania has 60 million people, 75% mobile-money penetration, and a legal sports-betting market growing 14% per year. Existing operators (SportPesa, Premier Bet, Betway) take a fixed-odds bookmaker stance: the house sets the price, the house wins on average. 50pick flips the model — the players themselves set the price by where they stake. The operator earns a clean 9% of resolved volume, audited and visible. That alignment is what makes a regulator comfortable and a player feel respected.

What's built today (2026-05-09)

Full player flow live in the Railway demo: account creation, KYC stub, wallet with starter credit, market browse, conviction dial, bet placement with two-step confirmation, win/lose flow with branded popups. Full operator console: 19 admin pages covering finance, players, AML, compliance, audit log, market resolver. 136 automated tests across 6 suites — every player flow + every admin page + 33 regulator-aligned controls — run green.

A market ready for a better product

Tanzania's regulated betting market doubled between 2020 and 2025. Mobile money is the dominant payment rail, and Swahili is the language of commerce. Three forces converge:

The existing big-three operators (SportPesa, Premier Bet, Betway-TZ) chase the same fixed-odds football-accumulator volume. The product is interchangeable. Their margins compress as players shop on price.

Where 50pick is different

DIMENSION	INCUMBENTS	50PICK
Pricing model	House sets fixed odds	Players set price by stake
Margin posture	5–8% house edge per bet, opaque	9% transparent, displayed every payout
Market scope	Football accumulators	Sports + Macro + Weather + Crypto + Culture
Language	English-led, Swahili afterthought	Bilingual EN + SW from day one
Player protection	Minimum compliance	LCCP-aligned: limits, cooling-off, self-exclusion
Audit transparency	None visible to player	Provably-fair page, HMAC-chained audit log

From "tell me about it" to "I won"

Five steps, every step measured, every step with a fall-back so the player is never stuck. Total time from cold to first bet: under three minutes on a smartphone over 4G.

Things that protect the player at every step

ACCOUNT SAFETY	Strong-password policy with public-breach blacklist. Account locks for 30 minutes after 5 wrong tries. Idle sessions kick after 24 hours.
STAKE GUARD	Two-step bet confirmation. The stake is locked at the price the player saw — no slippage. A misclick can never place a bet.
RG CONTROLS	Daily / weekly / monthly deposit caps. Loss caps. Reality-check pop-ups. Cooling-off (1 h / 24 h / 1 wk). Self-exclusion (24 h → permanent).
TRANSPARENCY	Every market lists the resolution source publicly. Provably-fair page lets the player verify the math themselves.

HOW EVERYTHING IS CONTROLLABLE

The operator console

19 admin pages covering every operational lever, every compliance obligation, every money flow. Every action is recorded in an append-only audit log that a regulator can verify with a single cryptographic check.

LIVE OPERATIONS

Real-time dashboard showing open markets, live volume, predictor counts, response times. One-glance health.

FINANCE

Total stakes, payouts, operator margin captured, withholding tax accrued. Daily / monthly views with CSV export.

PLAYERS

Search by phone or ID. Drill into any account: wallet, KYC status, bet history, RG limits, audit trail.

COHORTS

Slice players by registration cohort, region, KYC status, deposit band. Spot anomalous behaviour early.

MARKETS

Create new markets through a wizard with required source-of-truth URL. Edit, void, archive. Source registry locked down.

RESOLVER QUEUE

Two-officer market resolution. The same officer can never confirm twice. Stage 1 stages the outcome, Stage 2 settles.

AML

Transactions over the FATF threshold queue here. Compliance officer reviews, approves or escalates with reason.

SELF-EXCLUSIONS

All active exclusions visible. Cannot be lifted by player while active. Audited approval flow for early reinstatement.

AUDIT LOG

Every state change, every wallet movement, every login attempt. HMAC-chained for tamper detection.

SYSTEM HEALTH

Live rate-limit buckets, SMS provider success rate, uptime, version. Backup & restore controls.

Built for a regulator's first audit

The Gaming Board of Tanzania, the UK's LCCP, and ISO 27001 all converge on the same principle: a betting operator must put player protection ahead of revenue and prove it with logs. 50pick was designed against that principle from the first sprint.

18+ AGE VERIFICATION		Server-side
NIDA-BACKED KYC		Pre-launch
DEPOSIT LIMITS (D/W/M)		Self-set
LOSS LIMITS		Self-set
REALITY-CHECK POP-UPS		30 min default
COOLING-OFF (1 H / 24 H / 1 WK)		One click
SELF-EXCLUSION (24 H → PERMANENT)		Two-step
HELPLINE VISIBLE ON EVERY PAGE		Footer
LOSS REFRAMED AS "POOL GREW"		Brand rule

"If gambling stops being fun, stop." — appears on every page footer in English and Swahili. Helpline 0800 11 0011 reachable from every screen.

What the regulator gets when they ask

A single command produces a signed export of every audit entry for any date range, every wallet ledger entry, every KYC submission, every self-exclusion, every market resolution, with cryptographic proof that nothing was modified after the fact. The same export format works for the Tanzania Gaming Board, the FIU, or an internal compliance review.

How TZS moves through 50pick

Every shilling that enters the platform follows the same five-step path. There is no off-ledger flow, no informal float, no "we'll reconcile it tomorrow." Mobile-money providers settle straight to the operator account; the platform writes a ledger entry the same instant.

STEP	PLAYER ACTION	SYSTEM ACTION
1 · DEPOSIT	Player initiates from mobile money (M-Pesa, Tigo Pesa, Airtel Money, Halo Pesa, Mixx)	Pending entry created. Aggregator confirms. Ledger entry confirms wallet credit. Audit log: WALLET · deposit
2 · BET	Drag dial, confirm	Stake debited atomically. Position opens. Audit: WALLET · bet.placed
3 · RESOLVE	Wait for outcome	Two officers confirm. Pool split by stake share minus 9% margin. Each winner credited. Losers' positions closed.
4 · WITHDRAW	Request withdrawal	KYC required (NIDA-verified). Mobile money provider sends. Withholding tax deducted at source.
5 · RECONCILE	—	Daily report generated. Operator account vs platform ledger reconciled to the shilling.

Where the operator's 9% goes

Why 5Opick wins

Tanzania's regulated betting market is dominated by three operators running the same fixed-odds football product. Switching costs are near zero — the player picks whichever app loads fastest. 5Opick's differentiation isn't a marketing claim; it's structural.

Three structural advantages

PARI-MUTUEL	The house never bets against the player. Players' stakes pool together; the operator earns a transparent fixed margin off the resolved volume. The model is the same one Hong Kong Jockey Club has used since 1971 with no modern bankruptcies in the model. Polymarket ran USD billions in annualised volume on a comparable framework.
WIDER SCOPE	Football still drives the bulk of acquired traffic. But weather (long rains begin before April 15? — every farmer cares), macro (TZS-USD month-end?), crypto, and culture markets attract a category of player our incumbents can't reach. Each category re-engages the same wallet.
COMPLIANCE-LED	The product was built backwards from the Tanzania Gaming Board's pre-application checklist. Every screen, every API, every audit entry was designed to pass a regulator's first inspection without re-architecting. Incumbents are retrofitting compliance; we shipped with it.

Risks we've already mitigated

RISK	MITIGATION
Pool too thin in a niche market	Minimum-pool gate at market creation; auto-void below threshold with full refund.
Match-fixing on a single match	Sportradar Integrity Services partnership planned pre-launch. Anti-fraud table flags suspicious bet patterns.
Self-exclusion bypass	Confirmation dialog before any irreversible RG action. Server-side enforcement on every login + bet attempt.
Mass-account abuse	Per-IP and per-phone rate limits on registration. Common-password blacklist. Account lockout after 5 wrong tries.
Operator-side tampering	HMAC-chained audit log; any modified entry breaks the chain on next verify.

Status & runway to launch

The product is feature-complete for a soft launch in Dar es Salaam. Two outstanding items gate paid traffic. Both are external (contracts + regulator) — neither is engineering work.

Done

Full player flow · admin console · KYC / wallet / betting / Mapigo · bilingual EN+SW · 136 automated tests passing across 6 suites · Tanzania Gaming Board pre-application materials drafted · Railway production deploy with PostgreSQL persistence · responsible-gambling controls server-enforced.

Pre-launch dependencies

SMS PROVIDER	Selcom or Beem agreement signed; TCRA-licensed sender ID issued. Until then, OTP delivery is dummy.
GBT MEETING	Pre-application meeting with the Gaming Board of Tanzania. Pool model classified as <i>betting</i> in writing. Lawyer engaged.
MOBILE-MONEY AGGREGATOR	Selcom or Azampay agreement signed. Same partner usually covers SMS too.
SPORTRADAR INTEGRITY	Partnership for live match-integrity feeds. Required for football market resolution at scale.
ISO 27001 STAGE 1	External audit booking. Pre-audit checklist already met by current architecture.

Soft-launch plan

Closed beta (50 invited players, no real money) — 2 weeks. Open beta (Dar es Salaam, real money capped at TZS 50K/account, 5 markets only) — 4 weeks. Public launch after GBT sign-off and the first independent reconciliation report.

"Predict events. Not chance." — and now, with a product, with a framework, with a regulator pathway, with a market behind us.
