50pick — how rates and payouts are calculated

A guide for administrators. Covers the two pari-mutuel games — normal polls and Up & Down — and Maswali Millionea, the weekly jackpot (section 5), which is not on sale yet.

50pick does not set odds. Normal polls and Up & Down are **pari-mutuel**: the players' own money makes the price. We take a fee from the losing side, and everyone on the winning side shares what is left, in proportion to what they staked. Maswali Millionea works differently — a fixed-price ticket and a weekly jackpot — and has a section of its own.

One rule, both pari-mutuel games. Up & Down and normal polls are charged in exactly the same way. The games differ in how the result is decided and how long they last — never in how the money is worked out.

1. The rates

Item	Normal polls and Up & Down — identical
Our fee	**13% of the losing side** (Platform 3% + Operator 10%). Nothing is taken from the winners' stakes.
Tax on our fee	TRA 10% + GBT 5% *of the fee we earned*. Never taken from a player's payout.
Minimum stake	TZS 500 (since 12 October 2026; it was TZS 1,000)
Maximum stake	TZS 1,000,000 — **per bet**
Positions per market	As many as the player wants, on either or both sides.
Bonus betting requirement	Only **one side** of a market counts toward clearing a bonus. The player is warned before confirming, and the bet still goes ahead.
Free cancellation	5 minutes after placing the bet, full refund. After that the bet is locked.
Withdrawal fee	1.5% of the amount withdrawn
Minimum deposit	TZS 1,000
Minimum withdrawal	The smallest amount that still leaves at least TZS 1,000 after the fee — **TZS 1,015** at a 1.5% fee (the fee is rounded to the shilling). The withdrawal screen states it.

These are the two pari-mutuel games' rates. Maswali Millionea has its own (section 5): a fixed ticket price, a fee on the jackpot taken only in a week someone wins, and 10 tickets per account per week. The withdrawal and deposit rows apply to the whole platform.

Rates are frozen when a market is created. Changing a rate today affects new polls and new rounds only — never a bet that has already been placed. Two markets running side by side can legitimately settle on different rates, so if a player disputes a payout, read the rates on *their* market.

Because the maximum is per bet, and players may place as many bets as they like, a player's total money on one market is not limited by that maximum. Their balance and the daily loss limit are what bound it.

2. How every payout is worked out

1. **The pool** — all the money in the market: winning side + losing side.
2. **Our fee** — 13% of the losing side.
3. **The net pool** — pool minus fee. This is what gets shared out.

4. **Each payout** — the player's stake ÷ the winning side × the net pool.

A payout always **includes the stake**. A player who stakes 60,000 and is paid 86,100 has made a profit of 26,100.

> **On normal polls and Up & Down, a winning bet is never paid less than it staked.** The fee only ever comes out of the losing side, so the winners' own stakes are untouched — whatever the shape of the market. Even on a market as lopsided as 999,000 against 1,000, a winning 10,000 bet on the crowded side still pays 10,009. *Maswali Millionea is the exception: a winning ticket's share can be smaller than the ticket's price (section 5).*

3. Game one — normal polls

The result is decided by an officer, on evidence, after the event. Polls can run for days or weeks.

Example 1 — a two-sided poll: "Will Simba win the derby?"

Player	Side	Stake
Amina	YES	60,000
Juma	YES	40,000
Neema	YES	100,000
Bakari	NO	80,000
Chausiku	NO	20,000
YES 200,000 · NO 100,000		**Pool 300,000**

In this case: YES wins

Losing side = NO 100,000. Fee = 13% × 100,000 = **13,000**. Net pool = **287,000**.

	Player	Stake	Paid	Profit / loss
From the winners	Amina	60,000	86,100	+26,100
	Juma	40,000	57,400	+17,400
	Neema	100,000	143,500	+43,500
From the losers	Bakari	80,000	0	−80,000
	Chausiku	20,000	0	−20,000
From the house	Fee earned		13,000	
	TRA 10% · GBT 5%		−1,300 · −650	
	50pick keeps		**11,050**	

Check: 287,000 paid + 13,000 fee = 300,000 pool. Every winner returned 1.435× their stake.

In this case: NO wins

Losing side = YES 200,000. Fee = 13% × 200,000 = **26,000**. Net pool = **274,000**.

	Player	Stake	Paid	Profit / loss
From the winners	Bakari	80,000	219,200	+139,200
	Chausiku	20,000	54,800	+34,800
From the losers	Amina	60,000	0	−60,000
	Juma	40,000	0	−40,000
	Neema	100,000	0	−100,000
From the house	Fee earned		26,000	
	TRA 10% · GBT 5%		−2,600 · −1,300	
	50pick keeps		**22,100**	

Check: 274,000 paid + 26,000 fee = 300,000 pool. Every winner returned 2.740× their stake.

What this shows. Same poll, same rate — a winning NO ticket returned 2.740× while a winning YES ticket returned 1.435×. Nobody set those numbers. NO was the smaller side, so fewer people shared a bigger prize. **The smaller side always pays better.**

Example 2 — a lopsided poll: a heavy favourite

Player	Side	Stake
Amina	YES (favourite)	300,000
Juma	YES (favourite)	150,000
Bakari	NO (outsider)	50,000
YES 450,000 · NO 50,000		**Pool 500,000**

In this case: the favourite (YES) wins

Losing side = NO 50,000. Fee = 13% × 50,000 = **6,500**. Net pool = **493,500**.

	Player	Stake	Paid	Profit / loss
From the winners	Amina	300,000	329,000	+29,000
	Juma	150,000	164,500	+14,500
From the loser	Bakari	50,000	0	−50,000
From the house	Fee earned		6,500	
	TRA 10% · GBT 5%		−650 · −325	
	50pick keeps		**5,525**	

Check: 493,500 paid + 6,500 fee = 500,000 pool. Every winner returned 1.097× their stake.

In this case: the outsider (NO) wins

Losing side = YES 450,000. Fee = 13% × 450,000 = **58,500**. Net pool = **441,500**.

	Player	Stake	Paid	Profit / loss
From the winner	Bakari	50,000	441,500	+391,500
From the losers	Amina	300,000	0	−300,000
	Juma	150,000	0	−150,000
From the house	Fee earned		58,500	
	TRA 10% · GBT 5%		−5,850 · −2,925	
	50pick keeps		**49,725**	

Check: 441,500 paid + 58,500 fee = 500,000 pool. The winner returned 8.830× their stake.

The complaint this answers: "I won but got almost nothing." Backing an overwhelming favourite means splitting a small prize among a large side — 1.097×, or 9.7% profit. It is not a fee problem: our fee there was 6,500 on a pool of 500,000, about 1.3%. Show the player the two pool figures on their poll.

If one side is empty. With nobody on the other side there is no prize and no fee. Every stake is returned in full, whichever way the event went, and 50pick earns nothing.

4. Game two — Up & Down

The money works exactly as in section 2 — 13% of the losing side. What is different is that Up & Down asks two separate questions: **the price band decides who wins, the pool decides how much**. A player can be right about the direction and still be refunded, if the price did not move far enough.

Who wins — the band

When the round opens we freeze the price and set two boundaries around it:

- Close **at or above the upper boundary** → UP wins.
- Close **at or below the lower boundary** → DOWN wins.
- Close **anywhere in between** → the round voids: every stake refunded in full, and we charge nothing.

Today the band is the asset's smallest meaningful move — on Bitcoin's 5-minute round that is four hundredths of a dollar — so in practice the round is simply “higher or lower” and refunds are rare. Gold's 15-minute round is the exception: it runs a wider 0.05% band, so a void there is normal.

Example 1 — a two-sided round (Bitcoin, 5 minutes)

Player	Side	Stake
Amina	UP	120,000
Juma	UP	80,000
Bakari	DOWN	100,000
Chausiku	DOWN	50,000
UP 200,000 · DOWN 150,000		**Pool 350,000**

In this case: the price closes higher → UP wins

Losing side = DOWN 150,000. Fee = 13% × 150,000 = **19,500**. Net pool = **330,500**.

	Player	Stake	Paid	Profit / loss
From the winners	Amina	120,000	198,300	+78,300
	Juma	80,000	132,200	+52,200
From the losers	Bakari	100,000	0	−100,000
	Chausiku	50,000	0	−50,000
From the house	Fee earned		19,500	
	TRA 10% · GBT 5%		−1,950 · −975	
	50pick keeps		**16,575**	

Check: 330,500 paid + 19,500 fee = 350,000 pool. Every winner returned 1.653× their stake.

In this case: the price closes lower → DOWN wins

Losing side = UP 200,000. Fee = 13% × 200,000 = **26,000**. Net pool = **324,000**.

	Player	Stake	Paid	Profit / loss
From the winners	Bakari	100,000	216,000	+116,000
	Chausiku	50,000	108,000	+58,000
From the losers	Amina	120,000	0	−120,000
	Juma	80,000	0	−80,000
From the house	Fee earned		26,000	
	TRA 10% · GBT 5%		−2,600 · −1,300	
	50pick keeps		**22,100**	

Check: 324,000 paid + 26,000 fee = 350,000 pool. Every winner returned 2.160× their stake.

And if the price barely moves: the round voids. All four players get their full stake back — Amina 120,000, Juma 80,000, Bakari 100,000, Chausiku 50,000 — and our fee is zero. This is a designed outcome, not a fault.

Example 2 — almost everyone on one side

Player	Side	Stake
Amina	UP	200,000
Juma	UP	100,000
Bakari	DOWN	30,000
UP 300,000 · DOWN 30,000		**Pool 330,000**

In this case: UP wins — the crowded side

Losing side = DOWN 30,000. Fee = 13% × 30,000 = **3,900**. Net pool = **326,100**.

	Player	Stake	Paid	Profit / loss
From the winners	Amina	200,000	217,400	+17,400
	Juma	100,000	108,700	+8,700
From the loser	Bakari	30,000	0	−30,000
From the house	Fee earned		3,900	
	TRA 10% · GBT 5%		−390 · −195	
	50pick keeps		**3,315**	

Check: 326,100 paid + 3,900 fee = 330,000 pool. Every winner returned 1.087× their stake.

In this case: DOWN wins — the thin side

Losing side = UP 300,000. Fee = 13% × 300,000 = **39,000**. Net pool = **291,000**.

	Player	Stake	Paid	Profit / loss
From the winner	Bakari	30,000	291,000	+261,000
From the losers	Amina	200,000	0	−200,000
	Juma	100,000	0	−100,000
From the house	Fee earned		39,000	
	TRA 10% · GBT 5%		−3,900 · −1,950	
	50pick keeps		**33,150**	

Check: 291,000 paid + 39,000 fee = 330,000 pool. The winner returned 9.700× their stake.

Notice what the fee did. When the crowded side won we earned 3,900; when the thin side won we earned 39,000. That is the same 13% rule both times — it is the losing side that changed size. Our income follows how the players lined up, and never comes out of a winner's own stake.

5. Game three — Maswali Millionea

> **Not on sale yet.** Millionea is switched off for every player until the Owner turns it on, and no week can open until the Owner has recorded the licence basis and funded the guarantee. The figures below are its rules' defaults. Each week freezes its own at its open, and the week's page shows them — if a player disputes a figure, read *their* week's.

Millionea is **not pari-mutuel**. A player buys a **ticket at a fixed price** and answers fifteen YES/NO questions — ten main questions and five reserves. Only ten are graded. Every ticket with **10 of 10** shares the week's jackpot equally; if nobody gets 10 of 10, the whole week's sales roll into the next week's jackpot.

Item	Maswali Millionea
Ticket	TZS 1,000, fixed — from the real balance only
Tickets per account	10 a week
Our fee	**13% of the jackpot**, taken only in a week with at least one 10 of 10 ticket. Nothing at all in a week nobody wins.
Tax on our fee	TRA 10% + GBT 5% *of the fee we earned* — as on the other games.
The floor	A winning week's jackpot is **at least TZS 1,000,000**, counted before the fee. The guarantee — Owner capital — tops it up.
Free cancellation	5 minutes after buying, full refund — and never in the last 5 minutes before the close. No paid exit.
The week	Sales Monday 00:00 to Friday 18:00 EAT; results and payout on the Monday or Tuesday after.

How a week's money is worked out

1. **The jackpot** — the carry-over plus the week's sales, or the floor, whichever is larger.
2. **Our fee** — 13% of the jackpot, only if at least one ticket has 10 of 10.
3. **Each share** — the jackpot minus the fee, divided equally among the winning tickets, rounded down to the shilling. A player with two winning tickets gets two shares.
4. **The top-up** — when the week's own money (the carry-over plus the sales) is less than the fee plus the shares, the guarantee pays the difference. Only in a week with a winner.
5. **What is left over** — the few shillings an equal split cannot share. They join the next jackpot as far as the week's own money covers them; the rest stays with the guarantee, whose top-up covers only the fee and the shares — so in a week the guarantee tops up, the whole remainder stays with it.

> **A winning ticket can be paid less than it cost.** There is no minimum share. In a 1,500-ticket week where 1,400 tickets reach 10 of 10, the jackpot is 1,500,000, our fee 195,000, and each share 1,305,000 ÷ 1,400 = **932** — less than the 1,000 the ticket cost; the 200 shillings the split cannot share join the next jackpot. The player is told this in the rules, in Help and by the assistant.

Example 1 — six weeks, to the shilling

Week	Tickets	Carried in	Result	Jackpot	Top-up	Fee	TRA · GBT	Paid	Carried on
1	300	0	no winner	—	—	0	—	0	300,000
2	400	300,000	1 winner	1,000,000	300,000	130,000	13,000 · 6,500	870,000	0
3	500	0	no winner	—	—	0	—	0	500,000
4	600	500,000	no winner	—	—	0	—	0	1,100,000
5	700	1,100,000	no winner	—	—	0	—	0	1,800,000
6	800	1,800,000	3 winners	2,600,000	0	338,000	33,800 · 16,900	754,000 × 3	0
Total	**3,300**				**300,000**	**468,000**	**46,800 · 23,400**	**3,132,000**	

Check: 3,300,000 sold + 300,000 top-up = 3,132,000 paid + 468,000 fee. 50pick keeps 397,800 of fee after TRA and GBT, less the 300,000 top-up: **+97,800** over the six weeks. While week 5 sells, week 4 is still being graded: week 5's jackpot shows its own sales only until week 4 settles, then week 4's 1,100,000 joins it.

Example 2 — just above the floor, one winner

Carried in 50,000, plus 1,000 tickets sold	1,050,000
The jackpot — above the floor, so no top-up	1,050,000
Our fee, 13% of the jackpot	136,500
TRA 10% · GBT 5% of our fee	−13,650 · −6,825
50pick keeps	**116,025**
Paid to the one winning ticket	**913,500**

Check: 913,500 paid + 136,500 fee = 1,050,000 jackpot.

Example 3 — seven winners, and the shillings a split cannot share

	1,500 tickets, nothing carried	300 tickets, nothing carried
The jackpot	1,500,000	1,000,000 (the floor)
Our fee, 13%	195,000	130,000
Each of the 7 shares	186,428	124,285
Paid in all	1,304,996	869,995
Top-up from the guarantee	0	699,995
Left over, into the next jackpot	**4**	**0**

In the floor week the top-up covers only the fee and the shares (130,000 + 869,995 − 300,000 = 699,995), so nothing carries into the next jackpot: the 5 shillings the split cannot share stay with the guarantee, and the register prints them.

Example 4 — a week that voids whole

Six of the ten main questions void and only four reserves can stand in. Every ticket is refunded its 1,000 in full; no fee is taken and no top-up paid; a carried jackpot of, say, 1,100,000 carries on untouched to the next week.

Example 5 — the final week

If the Owner stops the product, the final week runs normally. If no ticket gets 10 of 10, the highest score shares the whole jackpot — no floor, no top-up, and our fee applies. Carried 1,800,000 plus 800 tickets: a jackpot of 2,600,000, our fee 338,000, and the four tickets with the best score (9 of 10) share 2,262,000 — **565,500 each**.

> **The guarantee is funded before a week opens.** It must hold the floor, less any confirmed carry-over, for every week not yet settled — the new one included. Week N+1 opens while week N is still being graded, so before week 1 the Owner pays in **TZS 2,000,000**. A settlement whose top-up the guarantee cannot cover stops and waits; it never pays less.

6. The three games, side by side

	Normal polls	Up & Down	Maswali Millionea
Our fee	**13% of the losing side — identical**		**13% of the jackpot**, only in a week someone wins
What a player puts in	**500 minimum · 1,000,000 maximum per bet — identical**		A fixed 1,000 ticket; 10 a week
Who decides the result	An officer, on evidence, with an objection window	The price feed, automatically, at the boundary	An officer per question, on evidence, with a 24-hour check window
How long it runs	Days or weeks	3 to 60 minutes	A week: sales Monday to Friday, results by Monday
Can a winner get less than they paid?	**Never**		Yes — when very many tickets win
Can everyone be refunded?	If one side is empty, or the poll is cancelled	Also whenever the price stays inside the band	If the week voids whole

> **If a customer asks what we charge:** on normal polls and Up & Down, 13% of the losing side, and nothing from the winners. On Maswali Millionea, 13% of the jackpot — and only in a week someone wins.

50pick — internal guide for administrators. Rules agreed 14 August 2026; the minimum stake lowered to TZS 500 on 12 October 2026. Every figure was produced by 50pick's own settlement calculation at the rates in section 1. Markets opened before these rules take effect settle on the rates that were frozen onto them at the time. Maswali Millionea's rules were decided on 16 October 2026 and are not on sale until the Owner switches the product on; section 5's figures come from its own settlement arithmetic.
