

50pick

Testing runbook — start and stop

admin.50pick.tz · keep this to hand during the test phase

START TESTING

1. Go to /admin/payments. Under PAYMENT PROVIDER, click SELCOM.

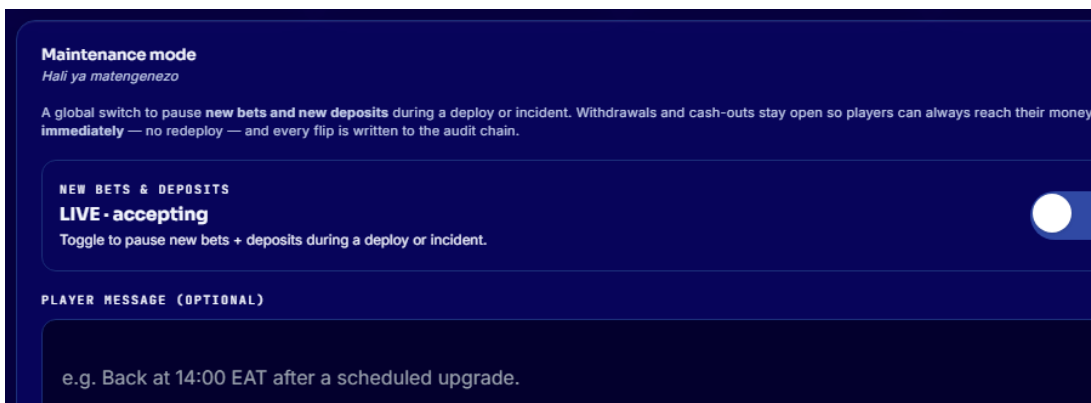

2. Redeploy the app in Railway. The setting is cached — it does not take effect until you do.
3. Make one small deposit yourself first, on your own number, before anyone else.
4. Check /admin/transactions shows it with BOTH references: the 50pick txn id and the Selcom ref.

Tell testers: deposits and betting work. Cash-out is CLOSED until the Selcom float PIN arrives.

STOP TESTING

1. Go to /admin/system. Turn Maintenance mode ON. This stops new bets and new deposits immediately, no redeploy.

2. Wait for live markets to settle. Check /admin/settlement is empty.
3. Only then, if you want money-in fully closed: /admin/payments, click MOCK (TEST), redeploy.

Do NOT switch to MOCK while markets are still live. That leaves people betting real money with no way to top up.

Withdrawals stay open in Maintenance mode on purpose, so nobody's money is trapped.

WATCH THIS DAILY

/admin/system -> Bet queue card.

The number that matters is TURNED AWAY. It should stay 0.

If it is not 0, players were refused because the platform was busy. Tell me and I will raise the limit.

Generated 19 July 2026. Deposits and betting verified at 200 concurrent bets on one market, 0 TZS lost. Cash-out blocked pending PAYMENT_VENDOR_PIN.
