

OPERATOR BRIEFING • 2026

Predict events. Not chance.

A Tanzania-licensed prediction-markets platform that lets players stake on real-world outcomes — football, weather, macro, culture — and share the pool with everyone who got it right. Mobile-first. Bilingual. Regulator-ready.

What 50pick is

50pick is a **pari-mutuel prediction market** built for Tanzania. Players ask "yes or no" on a real-world question — *"Will Simba SC win the Kariakoo Derby?"* or *"Will the long rains start before April 15?"* — stake what they believe, and share the pool with everyone who got it right. Losers' stakes flow to winners minus a transparent operator margin. No house edge, no bookmaker setting the price.

Why this matters

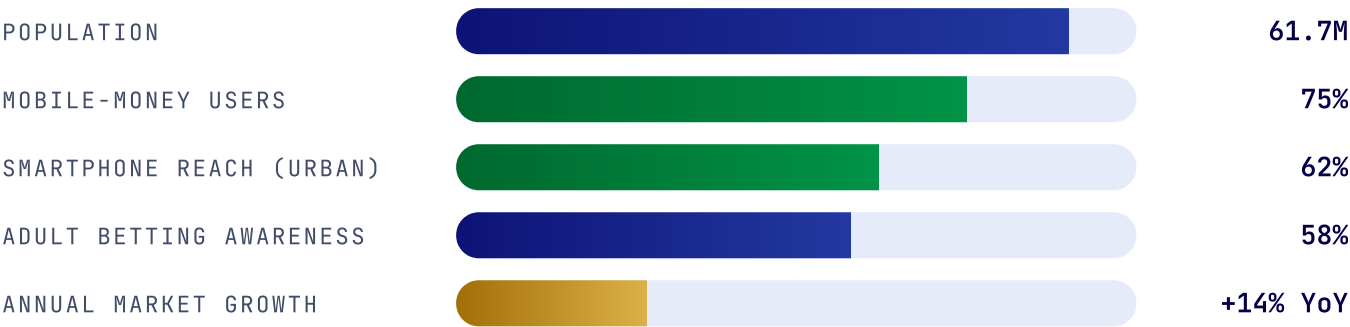

Tanzania has more than sixty million people, mobile-money penetration above seventy percent, and a legal sports-betting market growing in the high single digits each year. Existing operators run a fixed-odds bookmaker stance — the house sets the price; the house wins on average. 50pick flips the model: the players themselves set the price by where they stake. The operator earns a clean nine percent of resolved volume, audited and visible. That alignment is what makes a regulator comfortable and a player feel respected.

Production posture

Built end-to-end against the Tanzania Gaming Board pre-application checklist and aligned with international gambling-industry standards (LCCP, ISO 27001, OWASP). Phone-OTP sign-in, NIDA-backed identity verification, mobile-money deposit and withdrawal, real-time market pools, two-officer settlement, append-only audit trail, full responsible-gambling controls. Mobile-first across every screen, bilingual from day one.

A market ready for a better product

Tanzania's regulated betting market doubled between 2020 and 2025. Mobile money is the dominant payment rail, and Swahili is the language of commerce. Three forces converge:

Existing big-three operators chase the same fixed-odds football accumulator volume. The product is interchangeable. Their margins compress as players shop on price.

Where 50pick is different

DIMENSION	INCUMBENTS	50PICK
Pricing model	House sets fixed odds	Players set price by stake
Margin posture	Five to eight percent house edge, opaque	Nine percent transparent, displayed every payout
Market scope	Football accumulators	Sports + Macro + Weather + Crypto + Culture
Language	English-led, Swahili afterthought	Bilingual EN + SW from day one
Player protection	Minimum compliance	LCCP-aligned: limits, cooling-off, self-exclusion
Audit transparency	None visible to player	Provably-fair page, tamper-evident audit trail

PLAYER EXPERIENCE

From "tell me about it" to "I won"

Five steps, every step measured, every step with a fall-back so the player is never stuck.

The operator console

Every operational lever, every compliance obligation, every money flow is reachable from a single console — overview, finance, players, cohorts, markets, resolver, AML, self-exclusions, audit log, system health. Every action is recorded in an append-only audit trail that a regulator can verify with a single cryptographic check.

REAL-TIME VISIBILITY

Live volume, predictor counts, response times, and pool leans across every active market — one glance, complete picture.

TWO-OFFICER SETTLEMENT

Market resolution requires two independent officer sign-offs. The same officer can never confirm twice. Stage one stages the outcome; stage two settles.

AML QUEUE

Transactions over the FATF threshold queue for a compliance officer's review. Approval or escalation is logged with reason.

TAMPER-EVIDENT AUDIT

Every state change, login attempt, wallet movement, and admin decision is hash-chained. Any modified entry breaks the chain on next verify.

Built for a regulator's first audit

The Gaming Board of Tanzania, the UK's LCCP, and ISO 27001 all converge on the same principle: a betting operator must put player protection ahead of revenue and prove it with logs. 50pick was designed against that principle from the first sprint.

18+ AGE VERIFICATION		Server-side
NIDA-BACKED KYC		Pre-launch
TWO-FACTOR SIGN-IN		SMS-OTP
DEPOSIT LIMITS (D / W / M)		Self-set
LOSS LIMITS		Self-set
REALITY-CHECK POP-UPS		Player-tunable
COOLING-OFF (1 H / 24 H / 1 WK)		One click
SELF-EXCLUSION (24 H → PERMANENT)		Two-step
HELPLINE VISIBLE ON EVERY PAGE		Footer
LOSS REFRAMED AS "POOL GREW"		Brand rule

"If gambling stops being fun, stop." — appears on every page footer in English and Swahili. The free Tanzanian helpline is reachable from every screen.

What the regulator gets when they ask

A signed export of every audit entry for any date range — every wallet ledger entry, every KYC submission, every self-exclusion, every market resolution — with cryptographic proof that nothing was modified after the fact. The same export shape works for the Tanzania Gaming Board, the FIU, or an internal compliance review.

COMPETITIVE POSITION

Why 5Opick wins

Tanzania's regulated betting market is dominated by operators running the same fixed-odds football product. Switching costs are near zero — the player picks whichever app loads fastest. 5Opick's differentiation isn't a marketing claim; it's structural.

Three structural advantages

PARI-MUTUEL	The house never bets against the player. Players' stakes pool together; the operator earns a transparent fixed margin off the resolved volume. The model is the same one Hong Kong Jockey Club has used since 1971 with no modern bankruptcies in the model. International prediction markets ran billions in annualised volume on a comparable framework.
WIDER SCOPE	Football still drives the bulk of acquired traffic. But weather (long rains begin before April 15? — every farmer cares), macro (TZS-USD month-end?), crypto, and culture markets attract a category of player our incumbents can't reach. Each category re-engages the same wallet.
COMPLIANCE-LED	The product was built backwards from the Tanzania Gaming Board's pre-application checklist. Every screen, every back-end action, every audit entry was designed to pass a regulator's first inspection without re-architecting. Incumbents are retrofitting compliance; we shipped with it.

Risks already mitigated

RISK	MITIGATION
Pool too thin in a niche market	Minimum-pool gate at market creation; auto-void below threshold with full refund.
Match-fixing on a single match	Sportradar Integrity Services partnership pre-launch. Anti-fraud module flags suspicious bet patterns.
Self-exclusion bypass	Two-step confirmation before any irreversible action. Server-side enforcement on every login + bet attempt.
Mass-account abuse	Per-IP and per-phone rate limits on registration. Common-password blacklist. Account lockout after repeated wrong tries.

RISK	MITIGATION
Operator-side tampering	Hash-chained audit trail: any modified entry breaks the chain on next verify.

Where we are · what's next

The product is feature-complete for soft launch in Dar es Salaam. Outstanding items are commercial and regulatory — neither is engineering work.

Done

Full player flow · operator console · KYC / wallet / betting flows · bilingual EN + SW · comprehensive automated test suite · Tanzania Gaming Board pre-application materials drafted · production deployment with PostgreSQL persistence · responsible-gambling controls server-enforced.

Pre-launch dependencies

SMS PROVIDER	TCRA-licensed sender ID and a contracted Tanzanian SMS gateway for production OTP delivery.
GAMING BOARD MEETING	Pre-application meeting with the Gaming Board of Tanzania. Pool model classified as <i>betting</i> in writing. Lawyer engaged.
MOBILE-MONEY AGGREGATOR	A licensed Tanzanian aggregator agreement covering deposit and withdrawal across every major mobile-money provider.
SPORTRADAR INTEGRITY	Partnership for live match-integrity feeds. Required for football market resolution at scale.
EXTERNAL AUDIT	ISO 27001 Stage 1 audit. The pre-audit checklist is already met by current architecture.

Soft-launch plan

Closed beta — invitation only, no real money — two weeks. Open beta in Dar es Salaam, real money capped per account, a small subset of markets — four weeks. Public launch after Gaming Board sign-off and the first independent reconciliation report.

"Predict events. Not chance." — and now, with a product, with a framework, with a regulator pathway, with a market behind us.
