

Up & Down — Operator Guide

For 50pick staff who run the Up & Down game. No technical knowledge needed. Every picture is the real screen.

1 · What the game is

A player bets whether a price — gold, silver, an index — will go **UP** or **DOWN** over a short window: 5, 15 or 30 minutes. One window is a **round**.

1. Round opens

We read the price from an approved website and save it, with the link.

2. Players bet

They pick UP or DOWN before the round closes.

3. Round closes

We read the price again — from the same link.

4. We pay

UP wins, DOWN wins, or nobody wins and everyone is refunded.

The price must move more than a small amount — the **margin**, normally 0.50% — for a side to win. If it moves less, the round is **VOID** and **every player gets their full stake back**. Nobody loses money on a round that barely moved.

KEY IDEA A round is settled against the exact web page it was opened on. We save the link when the round opens and go back to that same link when it closes. If the price cannot be confirmed, the round voids and refunds — **we never guess a price**.

Rounds

Up & Down is a **separate game** from normal polls, so it has its own section at the bottom of the sidebar: **UP & DOWN · JUU NA CHINI**.

It has three screens:

- **Overview** — what you trade and the timers that produce rounds.
- **AI proposals** — ask the AI to suggest a new market, then approve it.
- **Rounds** — every round that has run, and where you cancel a stuck one.

⚠ You will **not** find Up & Down rounds under *Markets* → *Curation queue*. That section is for long-form polls only.

AI ORACLE COST

\$59.37

Gharama ya AI

▲ 656 calls · 98d \$59.37

This is Up & Down alone— long-form polls are reported separately under Money → Reports. GGR is the commission kept on this game (TZS); AI cost is what its price oracle spent (USD). The platform's combined figures, and the TRA/GBT levy on total commission, are unchanged.

Assets · 3

KEY	NAME	SOURCE	PRECISION	CHAINS	ENABLED
GOLD	Gold XAU/USD · Dhahabu	goldprice.org macro	2 dp · min 15	0/1	☒
S&P 500	S&P 500	kitco.com			☐

Top row: how many assets are switched on, how many timers (**chains**) are running, the fee on a balanced 10,000 pool, and the **staleness window** — how fresh a price must be before we accept it. **Middle:** the money for this game only, over the period you pick. **Bottom:** your assets, each with the website its price comes from. Here **Running chains is 0** — no rounds are being produced right now.

4 · Starting a new market

Option A — Let the AI propose it (easiest)

ASSET

GOLD · XAU/USD

ROUND LENGTH

15 minutes

STEER (OPTIONAL)

e.g. prefer the page with a visible quote time

The AI may only read goldprice.org — the domain you approved for GOLD. It will report the price and quote time it actually finds there; a page with no readable price is held back rather than armed. Margin defaults to 0.50% and the round window is 90s — you can change both before approving.

Ask the AI to propose

Queue · 0

Foleni

Pick the asset and the round length, then press **Ask the AI to propose**. The AI opens the approved website and reports the price and time **it actually found there**. Note the line under the form: it names the one website the AI is allowed to read for this asset — it cannot go anywhere else.

- Go to **Up & Down** → **AI proposals**.
- Choose the asset and round length. Press **Ask the AI to propose**.
- Look at the **“What it found there”** column.
 - A **price and a time** → good, the page can be used.
 - A **dash (–)** → the AI could not read a price there. **This is normal** and the check doing its job. Try a different page or asset.
- Press **Review**. Change the link, round length, margin or wording if you want. Then **Approve**.
- Press **Arm** and type **ARM** to confirm. The market starts at the next boundary.

Option B — Set it up yourself

- Overview** → **+ Add asset**: name, symbol, and the web page the price comes from. That website must already be approved under **Sources & categories**.
- Switch the asset **on** (the toggle on the right of its row).

- 3. **Add chain:** choose the asset and 5, 15 or 30 minutes.
- 4. Press **Start**.

5 · Rounds — checking the game is healthy

SNP500 15m #88 S&P 500	07-30 08:50Z → 07-30 09:05Z	— → —	VOID · OPERATOR	TZS 0	0	07-30 12:11Z	—

Every round: when it opened and closed, the outcome, how much was staked, how many players, and when it settled. In this picture every round shows **VOID** and **TZS 0** — that is a game that is **not working**: no price could be read, so every stake was refunded. A healthy day shows a mix of **UP** and **DOWN** with real volume.

Your daily check — five minutes

- 1. **Rounds** — are recent rounds settling UP/DOWN, not a long run of VOID?
- 2. **Overview** → **price readings** — each asset should show a recent price and a recent time. A dash means we cannot read it.
- 3. **Chains are running**, not paused — unless you paused them on purpose.
- 4. **Void rate** on each chain. Amber at 40% or more means that market needs attention.
- 5. **Money** — staked and paid out look sensible for the day.

REMEMBER A void is not a loss. Every player gets their full stake back and we take no fee. A high void rate is a **quality** problem, not a money problem — but it makes the game boring, so fix it.

6 · When something looks wrong

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
Price shows — ; rounds keep voiding	We cannot read the price from that website.	Pause the chain. Tell the technical team. Players are safe — they are being refunded.
"Confirming price" for a long time	We are retrying the reading. By design.	Wait. If it never confirms, the round voids and refunds by itself.
A round is stuck holding player money	Something went wrong for that round.	Rounds → Void . Give a clear reason. Every stake is refunded in full.
Too many VOID results	The margin is too wide for how much that price moves.	Lower the margin on that chain (e.g. 0.50% → 0.30%). Only affects new rounds.
You cannot change an asset's web page	Rounds are still open on the old page.	Correct behaviour — those players were told the old page. Pause, let them finish, then change it.
Top bar shows AI OFF	Usually the AI key is missing — not that someone switched it off.	Tell the technical team. You can still review and start proposals already in the list.

7 · Five rules — never break these

- 1. Never change where a price comes from while a round is open.** Those players were told one source and the round must finish on it. The system will stop you — do not look for a way around it.
- 2. Never approve a proposal with no price shown.** A dash means the AI could not read that page. Starting it anyway means rounds that cannot settle.
- 3. Never use the "Simulated" price feed on real money.** It invents prices. It is for testing only, and it asks you to type `SIMULATED` to confirm — that prompt is your warning to stop.
- 4. Never announce a price we have not confirmed.** If a screen shows a dash, that is the honest answer. Do not fill it in from another website.
- 5. Always give a real reason when you void a round.** It is a permanent record and the company may have to explain it.

8 · Words you will see

WORD	MEANING
Asset	A thing with a price — Gold, Silver, S&P 500.
Chain	One asset at one round length. “Gold 15m” is one chain. A chain produces rounds automatically.
Round	One 5, 15 or 30-minute window that players bet on.
Margin	How far the price must move for a side to win. Normally 0.50%.
VOID	No winner. Every stake refunded in full, no fee taken.
Boundary	The clock moment a round opens and the next begins — :00, :15, :30, :45.
Staleness window	How old a price may be and still be accepted. Normally 90 seconds.
Proposal	An AI suggestion for a new market. It does nothing until a person approves and arms it.
Arm	Turning an approved proposal into a live, running market.

IF IN DOUBT **Pause the chain.** Pausing stops new rounds and lets open ones finish normally — no player is left holding a bet. It is always safe, it never needs technical help, and it is undone in one click.

50pick · Up & Down Operator Guide · Internal use only. Technical detail lives in `docs/UPDOWN-SPEC.md` and `docs/UPDOWN-ARCHITECTURE.md` — you do not need them to run the game.
